Industry Snapshot

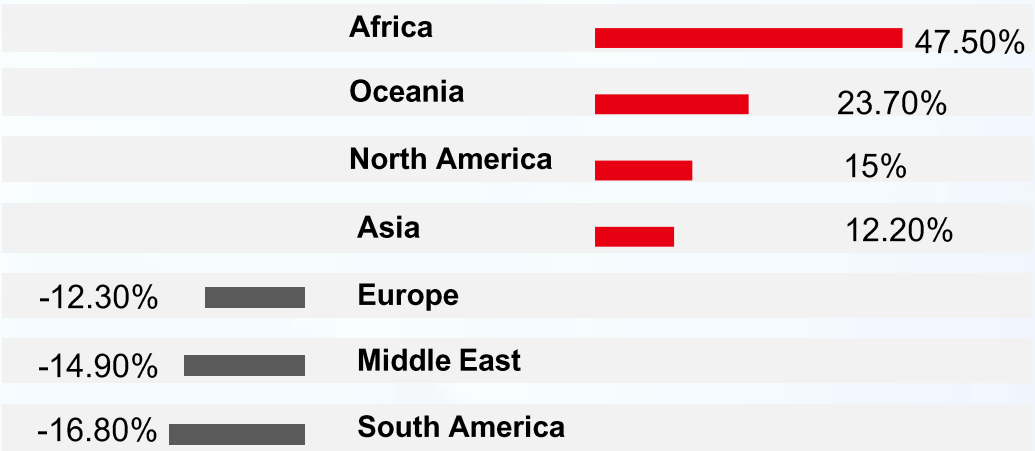

2025H1: Chinese demand surged driven by installation rush while overseas market remained steady

- In the first half of 2025, China added 211.61GW solar installations due to demand rush, up 106.49% yoy, accounting for 80% of the national newly-added renewable energy, which represented rising position of solar in the energy increments.
- According to Chinese module export data, the overseas demand in 2025H1 was relatively stable, but the regional development showed differentiated trends. The exports to the traditional markets like Europe have slowed down while exports to the emerging markets like Africa, Oceania and Asia maintained steady growth, which are becoming the important growth source for Chinese module exports.

Solar prices were still at the bottom and some even hit a new low

- The prices of the solar industry chain were still at the bottom in 2025H1 due to the mismatch between the supply and demand. Although the solar prices have rebounded briefly impacted by Chinese installation rush, but with the end of the installation rush, the prices of all links have fallen rapidly, and the prices of some links have even hit a record low. Therefore, large-scale losses in the solar industry continued.

Business Review

2025H1: Net loss narrowed largely yoy and cash flows from operations improved significantly

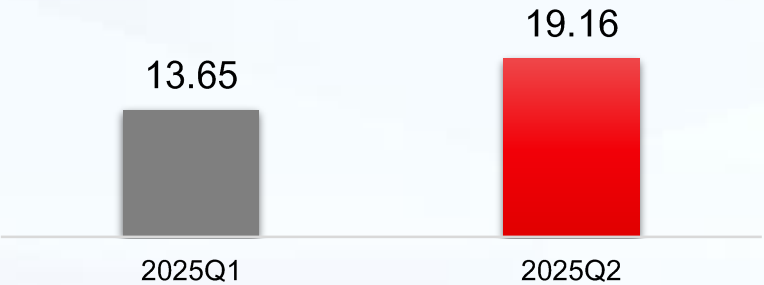

➤ Impacted by the low-price competition in the industry, the overall shipment increase of the company's main products didn't help increase the revenue, resulting in continued operation loss in 2025H1. Benefited from the improvement of internal operation quality, some financial indicators have changed significantly. Among them, the company's expenses and asset impairment loss during the period decreased significantly, driving the net loss to narrow by about 51% year-on-year; net cash flow generated from operating activities was -484 million yuan, up 92% year-on-year.

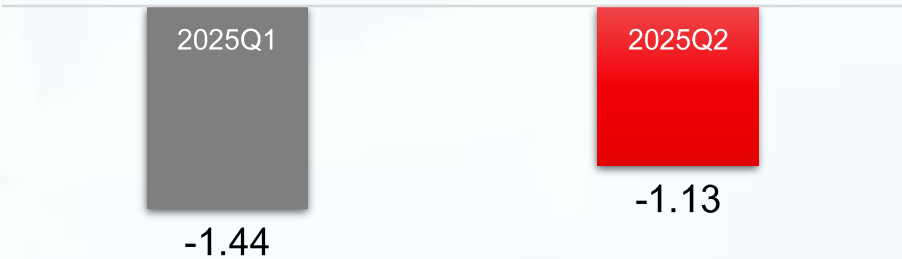

2025Q2: Revenue grew by 40% QoQ, and cash flows from operations and gross margin both turned positive

- Benefited by the strong installation rush in China, and the continuous cost decline of the company's major products, the company reached a revenue up by 40% quarter-on-quarter, net loss narrowed by 21%, and saw the net cash flow from operating activities and gross margin turn positive in 2025Q2.

High-efficiency BC products continued to be released, and global expansion made progress

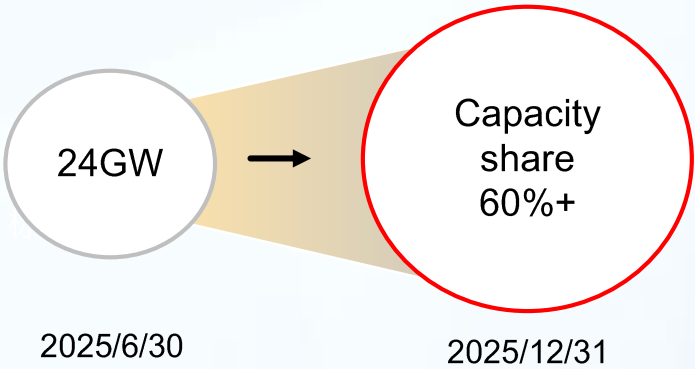

- In the first half of 2025, the company's high-efficiency HPBC 2.0 modules were gradually put into the market, quickly winning market recognition with high conversion efficiency, pleasing appearance, high security and other features. The orders and shipments grew rapidly, especially in the second quarter of this year, HPBC2.0 module shipments increased by more than 100% quarter-on-quarter.

HPBC 2.0 module shipments in 2025H1: 4GW

▲ Covering more than 70 countries or areas

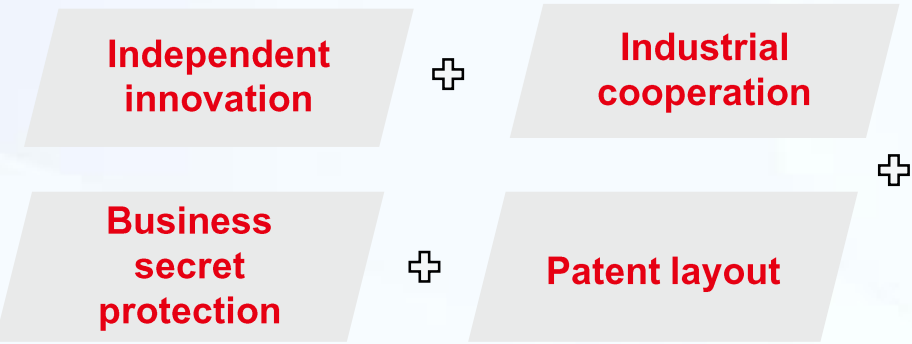

HPBC 2.0 cell capacity added continuously

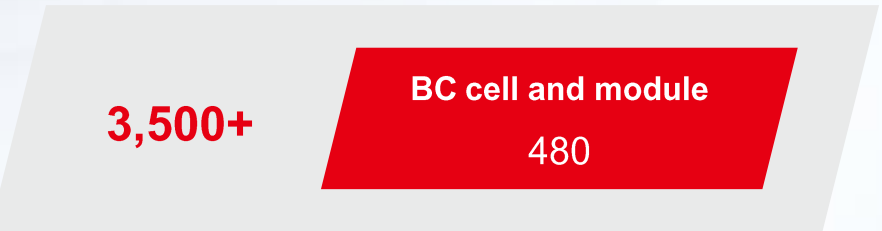

- ▲ HPBC 2.0 cell capacity in XiXian New Area and Tongchuan of Shaanxi have commenced production gradually while the Weibei project is under construction
- ▲ Capacity cooperated with Yingfa Derui and Pingmei LONGi have commenced production

Always adhere to technological innovation, and made breakthroughs in product R&D efficiency

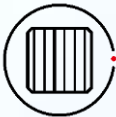

➤ Build BC technical barriers in all aspects

➤ Patents of the company as of June 30, 2025

➤ The R&D efficiency of cells and modules continued to set new world records
