01 Industry Snapshot

02 Business Review

03 Future Outlook

7 PART

Industry Snapshot

Global solar boom continued in 2024 with about 37 GW-scale markets

- In the context of global energy transition, solar power, as a sustainable and clean energy source, is widely used around the world. The global solar installations in 2024 hit 530GW, up 36% yoy, with about 37 markets reaching GW-scale.
- In terms of regions, China, Europe, US and India still dominated the demand, among which China was still the largest market and added 278GW solar installations, accounting for >50% of the global annual demand. Emerging markets like Middle East, Africa and Southeast Asia accelerated solar growth, injecting new impetus for the global solar development.

Industry supply and demand imbalance intensified, and solar prices fell below production cost in 2024

- The industry supply and demand imbalance intensified although the global demand maintained growth in 2024. Solar prices continued to decline and even fell below the production cost, resulting in the general pressure on the operating results of solar companies.

Change of polysilicon price and cost

Change of wafer price and cost

Change of cell price and cost

Change of module price and cost

2 PART

Business Review

Results impacted by industry adjustment, and net operating cash flow in 2024Q4 improved

- In 2024, during the industry adjustment, the prices of the company’s main products, wafers and modules, down 61% and 39% yoy, respectively. The solar price decline and technology upgrading led to asset impairment loss of RMB8.7 billion, investment loss of RMB486 million for polysilicon company, which all resulted in the company’s operating loss in 2024.
- Faced the evolving industry competition, the company actively adjusted business strategy, strengthened internal management, and fully implemented lean management, which drove a significant improvement in net cash flow from operating activities in the fourth quarter.

Items	2024
Revenue (RMB billion)	82.58
Net profit attributable to shareholders of the company (RMB billion)	-8.62
Net cash flow from operating activities (RMB billion)	-4.73
Total assets (RMB billion)	152.85
Total shareholders' equity attributable to the company (RMB billion)	60.90
Gross margin	7.44%
Debt-to-asset ratio	59.83%

**Net cash flow from operating activities
(RMB billion)**

Product delivery made steady progress, while HPBC module shipments saw a yoy surge

Cell & module shipments (GW)

HPBC module shipments (GW)

Mono wafer shipments (GW)

Wafer shipment breakdown (GW)

The company controlled wafer production and sales volume due to sharp decline of the wafer prices in 2024.

Devote to self-dependent innovation of technologies with remarkable R&D achievements

➤ Wafers: achieved a breakthrough on solar wafer performance in the last decade

- **TaiRay wafers: adopting new ingot pulling process of TRCz**
- Featuring good resistivity concentration and gettering performance, and high mechanical strength
- Supporting efficiency increase of full platform of mainstream solar cell technologies

3,342
patents

Two achievements the company hosted and participated in were awarded
Second prize of the National Science and Technology Progress Award,
Second prize of the National Technology Invention Award by State Council

➤ Cells and modules: broke world records for many times

34.85%

Crystalline silicon-perovskite tandem solar cell
Breaking the world record for this cell technology

27.81%

Hybrid Interdigitated-Back-Contact (HIBC)
Breaking the world record for monocrystalline silicon solar cells

25.4%

HPBC2.0 modules
Putting an end to overseas brands' winning streak of 36 years in module efficiency records

Breakthrough made on BC technology with roll-out of HPBC2.0 modules for all scenarios

- Since May 2024, the company rolled out modules for all scenarios based on high-efficiency HPBC2.0 cells adopting self-developed TaiRay wafers, which made great breakthroughs on module output power, efficiency and bifaciality, further improving the company’s differentiated competitive advantage of BC products.

670W	24.8%	80 ± 5%
Module power	Module efficiency	Module bifaciality

HPBC
2.0

Modules for utility solar projects: **Hi-MO 9**
 Modules for distributed solar projects: **Hi-MO X10**

- 
Higher module power
 Blending power is 40W+ higher than the mainstream N-type modules
- 
More power generation
 8%-11% of more electricity generated in the same land area compared to the mainstream N-type modules
- 
Less LCOE
 Installation increased by 6.4% in the same land area compared to the mainstream N-type modules
- 
Higher reliability
 Passed stricter reliability tests of third parties

Products recognized by industry authorities and brand influence continuously improved

Retained AAA rating in the PV ModuleTech bankability ratings for 21 consecutive quarters

Won module awards of TÜV Rheinland “All Quality Matters” for 8 consecutive years

Named Top Performer in PVEL PV Module Reliability Scorecard for 7 times

Named Highest Achiever by RETC for 6 consecutive years

Named Top Brand PV Modules by EUPD Research for 4 consecutive years

Actively practice the concept of ESG and promote sustainable development of the enterprise

➤ In 2024, the company actively promoted energy conservation and emission reduction in production and the use of renewable electricity, accelerated the product carbon footprint management system and certification, made good progress on key issues, and important ESG ratings were improved.

53 Carbon Footprint Certificates

for wafers, modules and hydrogen products, covering France, South Korea and international EPD system

MSCI ESG RATINGS

BBB

The rating was upgraded to "BBB", and the weighted-average key issue score is ranked as the highest among A+H semiconductor stocks and first in the solar industry.

FTSE4Good

3.8 score/ (5 score)

FTSE Russell ESG ratings

Solar industry continued fluctuation in 2025Q1, and the company reported yoy decline of operating loss through operation improvement

➤ In the first quarter of 2025, the solar industry was still in the adjustment stage. Although the solar prices have recovered slightly in March, the prices for the whole quarter were less than the production costs, and solar companies' profitability faced pressure continuously. The company made adjustment on operations, strengthened cost reduction and efficiency increase, driving the operation loss reduced compared to 2024Q1.

Items	2025Q1
Revenue (RMB billion)	13.65
Net profit attributable to shareholders of the company (RMB billion)	-1.44
Net cash flow from operating activities (RMB billion)	-1.75
Gross margin	-4.18%
Debt-to-asset ratio	59.80%

Wafer shipments in 2025Q1 (GW)

Cell & module shipments in 2025Q1 (GW)

3 PART

Future Outlook

Operation guidance for 2025

- In 2025, the company will focus on optimizing the production capacity structure, pool resources for the construction and upgrading of high-efficiency HPBC 2.0 production capacity, and promote the continuous increase of the BC product market share. Meanwhile, the company will continue to provide customers with high-value products and solutions, and promote the steady growth of the company's product shipments.

BC capacity plan by the end of 2025 (GW)

Product shipments for 2025 (GW)
